ADW

"A LITTLE BIT ABOUT ME IN <500 WORDS"

Andre Walke is the founder and principal research partner of 3v3Networks, an Information Security Research and Development company which he co-founded with his wife in 2010.

Having been involved in technology from his early teens where he experimented heavily with Radio Data and Telemetry systems he was a central figure in the establishment of two "Beeper" companies here in Barbados, technology was a natural fit when he immigrated to the United States to pursue a course of study in Electrical Engineering.

During the course of his study in New York, Andre has worked with companies like Walt Disney, ABC and ESPN where he gained significant experience in the areas of Network Management and Monitoring, Network Design and Network Security Architecture.

As a Senior Security Analyst with Maureen Data Systems he was responsible for the development and implementation of that company's Internet Traffic Shaping and Analysis consultancy unit which was one of his specialties. This unit specialized in bandwidth amplification and undertook some major contracts with organizations as diverse as Brooklyn Academy of Music, the Bank of New York and National Public Radio (WNYC).

On returning to Barbados Andre joined the Civil Service through the Data Processing Department where he spearheaded the design and implementation of what is today the Barbados.gov.bb e-mail platform.

On returning from a Conference on the creation of CSIRTS (Computer Security Incident Response Teams) in Trinidad in 2009, he realized that Barbados was significantly lagging behind the developed world in matters of Cyber and Information Security.

This realization led to the founding of 3V3Networks, which was envisaged as an Information Security Consulting R&D company with specific emphasis in the areas of Information Security Solutions
